Leland Hall, 2:00 p.m.
Social Places, 3:30 p.m.
Get out of the daily grind
Go to church on Sunday.
Rev. Geo. A. Shields,
Minister.

Successful Poppy Day

The Poppy Day Tea and Sale of Home Cooking and also the sale of Poppies by the Ladies of the I.O.D.E. on Saturday, was successful. Good patronage was enjoyed by the ladies.

CARD OF THANKS

We wish to thank you Dear friends and neighbors for the kindness, sympathy and love shown us, during our dear son Bertie's sickness, also thanks for the beautiful wreaths and flowers.

May God bless you all with his richest blessing and love.
Mr. and Mrs. Hugo Gilman and son Gustaf, Buffalo, Alberta.

Armistice Day Service

For "Those Who Sleep"
A very impressive short service was held by the ladies of the local chapter of the I.O.D.E. at the Cenotaph, on Monday morning, November 11. The service was conducted by Rev. Geo. Shields. The two minutes silence was observed. A wreath of poppies was placed on the Cenotaph, during the ceremony by Mrs. D. McEachern, Regent of the Chapter.

Welcome Snowfall

Snow fell on Sunday morning, covering the ground with a white mantle. The fall was not heavy but was welcomed by farmers and people in general.

A good number of towns people attended the turkey supper put on by the ladies of Leland at their hall on Armistice day, Monday.

The ferry which had been out of operation for a few days owing to ice in the river, commenced operations again on Wednesday.

Serious Outbreak of Fire Is Checked in Time

A very narrow escape from a serious fire outbreak occurred in town early Monday morning. Flames were noticed shooting from the roof of the Empress Bakery by Vic. Saunders and Sid Hamilton, who were coming out of the restaurant after a late supper. They immediately sounded the fire alarm, but owing to the heavy atmosphere the sounds did not carry and were only heard by a few. The telephone was used, however, and caused a number from their sleep.

The hand extinguishers were soon busy at work and materially helped in checking the flames until the chemical engine tanks began to get into their work. The heavy atmosphere and the snow on the roof of the building, were also factors in saving the town from a disastrous fire. Had the flames spread to the theatre building, undoubtedly the whole block would have been destroyed. Much commendation is due to those who helped in quelling the flames for their promptness and the very thorough work which was done.

Damage to the building is not so great as might have been expected; insurance was carried. Some severe fire bags of flour were more or less damaged.

CARD OF THANKS

I take this means of expressing my deep felt thanks to all who so kindly gave their assistance in quelling the outbreak of fire which occurred at the Empress Bakery in the early hours of Monday, November 11.

—R. MURRAY

The best fighters, and the only warriors in the highest sense of the word have always been those who have championed a righteous cause. And the hero of the future will be the man who champions a worthy cause with the worthy weapon—not the weapons of barbarism, which we have to use because the barbarians have come upon us, but the weapons of science, legislation and religion.—Ex.

Roman Pawluk has joined the staff of the Empress Lumber Yards.

New Catholic Church To Be Opened First of December

Reverend Father Greene, of Calgary, Will Have Charge of Ceremony

The Blessing and Dedication Services of the new Catholic Church, will be held on the first Sunday in December. The name to be given is, "The Church of the Infant Jesus." Plans of commencement will be 10:45 a.m. Services will be conducted by Reverend Father Greene, of Calgary, assisted by Rev. Joseph Sullivan, of Red Deer, Rev. Peter Sullivan, of Cuddy, Alta. and Rev. Leo Sullivan. An open invitation is extended to citizens in general, of all denominations, to attend this ceremony.

At 3 o'clock p.m., solemn Benediction of the Blessed Sacrament will take place. A hot dinner will be served by the members of the Church, in the basement of the Church, directly following the morning service.

Rev. Leo Sullivan, Pastor.

Gasoline and Coal Oil Take Heavy Toll of Life

The Govt. of the Province of Saskatchewan are issuing warnings against the practice of using coal oil and gasoline for starting fires.

Fourteen persons have lost their lives while nine others have suffered serious injury as a result of this practice in Saskatchewan this year.

In spite of repeated warnings to the public against the use of these highly inflammable and explosive articles, there apparently is no abatement in their use.

The extremely dangerous practice of using coal oil and gasoline for starting fires in the home apparently is increasing in Saskatchewan, for the 14 fatalities reported in the first nine months of this year exceed the total for any complete year since 1924. Further, these tragedies occurred prior to the fall and early winter, a season known as one of great hazard from this source.

Tank House Painted

The local water tank house is now beginning to show up mud, or a well-earned coat of paint.

R.M. of Mantario

Minutes of meeting, November 4, 1929, at Orange Hall, Calgary, at 10 a.m., present: Revue Austrum and a full council.

The finance committee examined the accounts presented; the following were found correct:

Empress Lumber Yards, Mantario, culverts Div. 4, 614; ditto, tools, machinery, mtes. 14,000; ditto, 555 Total, 26.69.
Empress Lbr. Yards, culverts, Div. 3, 10.95. A. J. MacCurdy, roads, Div. 3, mtes. 8.00; A. M. Fraser, roads, Div. 4, mtes. 12,000; E. A. Saunders, roads, Div. 4, mtes. 3.00; Mervyn Cochrane, roads, Div. 4, mtes. 13.50; Arthur Anderson, roads, Div. 4, mtes. 16.00; ditto, Div. 4, capital, 10.00; Arthur Matthews, roads, Div. 4, capital, 36.00; S. A. Dagg, roads, Div. 4, mtes. 12.00; H. D. May, capital, roads, Div. 4, 14.89; Gordon May, capital, roads, Div. 4, 14.00; J. T. Frausis, roads, Div. 4, 0.00; Priestley Ravitt, roads, Div. 4, mtes. 18.00; Roy Rivers, roads, Div. 3, mtes. 49.90; Jas. F. Rivers, ditto, 28.00.

Richardson Road Machinery Co., culverts, Div. 4, cap., 116.25; Beaver Lbr. Yards, Div. 6, cap. cap. 11.90.

Tools, machinery, mtes. 500. Treas., freight, etc., 4.85; Ditto, Richardson Road Machinery Co., shares, 55.50; Imperial Oil, 3.83.

A. W. Anderson, destruction of weeds chargeable to Sask. Farm Loan Board, 87.00; Ditto destruction of weeds on Highways, 12.80; Roads, Div. 2, mtes. Fred. Steinsky, 40.00; Ditto, J. Montgomery, 5.80; Culverts, mtes. Div. 2, J. Montgomery 0.00; Roads, Div. 2, capital, Hitchcock Lacey and Co., 36.00; Mowat, MacTavish & Co., audits fees, 66.70; Mrs. Schraffer roads, mtes. Div. 1, 6.00; M. Cronier, machinery mtes. 2.00.

Hospital maintenance, Alaska, 153.00; Empress, 109.00; Estaline Sept. work, 30.00.

Sec. Treas., postage, etc., 29.80; Dry sheet, Div. 1, roads, 32.00; F. Danowski, tools and machinery mtes. 21.45. Full total, 1025.71.

Curling Meeting

A meeting of the Empress Curling Club will be held in the rotunda of the Empress Hotel, on Friday evening at 8 p.m.

That minutes of previous meeting be confirmed.
Dahl—Secs.—Treas. monthly report be accepted and filed.

Batty—That the Alaska Telephone Co. be notified of the dangerous condition of the poles on their line on the Empress-Alaska road, and notified that in case of accident or damage caused thereby the Municipality will decline to accept liability.

Batty—That application be made to the Dept. of Highways to obtain title to road on N.E. 15-28-20 w-3 and S.E. 22-20-29 w-3. The Municipality to be responsible for all claims, compensation and damages.

Hawlin—That compensation for right-of-way S.E. 22-20-29 w-3 be paid to Grant Johnson in the amount of \$80 to cover all claims for compensation and damages and use of the right-of-way previous to payment of such compensation.

Austrum—That amount due Johnson for above be now paid. The Reeve and Secs. Treas. reported as a committee in regard to the Alaska Hospital. They had called at the hospital on the 8th ult. and found that the building was in the hands and under the management of Miss Edna Howard and Miss E. C. Smith, who are taking the full financial responsibility in regard to it, jointly. They had signed the standard agreement with the municipality in regard to the patients' fees. Correspondence was also read in relation to the formation of an advisory board, which the nurses wished to have established, consisting of representatives of the town of Alaska and of the municipalities adjoining, and which should be for the purpose of co-operation between the management of the hospital.

The Average Man and the League

With the closing of the 1914-15 season the League of Nations it is well for those both in cities and towns, and the country districts, to get some idea of what the League means to the average citizen.

Immersed in our own affairs and the daily complications and worries of life, it is hard for the man in the street or the farmer in the field to realize what the League means to him. All of us are somewhat hazy about world politics, especially in these days (when indifferent crops) and business complications make us apt to concentrate on our own immediate affairs. Occasionally we hear high sounding phrases glorifying the accomplishments of the League; at other times the sneers of cynics who advise us to go about our business and take no stock in an agency which can never have any beneficial or practical effect on our lives.

Yet the League and what it does at Geneva are of tremendous concern to all of us. A well known Canadian writer has said: "The League of Nations is not the infallible and mighty thing described in superlative rhetoric by certain orators, the nations do not tremble with fear at its frown, it has disappointed rascals, visionaries, and it does a number of things to which little attention is paid." Yet despite all of this, and notwithstanding some failures, the League has become more than justified itself. In ten years it has prevented ten wars and become an effective central agency for the consideration of crises and the employment of conciliatory arbitration in great and small disputes.

Some people have thought that the League ought to be able to almost automatically put an end to the fighting between two South American republics, or prevent Arab slaughtering Jews in Palestine, in the twinkling of an eye. Such actions are almost beyond the power of any agency devised by man. Hate, born of jealousy, fanaticism, racial and religious antipathy may have into wholesale murder at any moment and justice and common sense are powerless for the moment. But such an agency as the League has time and again proved that once the first outbreak is spent, it can prevent the trouble repeating, and restore peace and sanity by conciliation, and if necessary, the invoking of economic and moral pressure.

The League of Nations, in short, has won the respect of the world, not only as an agency that can prevent war, but as a necessity that has grown up with the complexity and interdependence of modern international life. Canada, like the other nations, and the citizens of Canada, in town and country, must stand foursquare behind the efforts of our children and our children's children to be placed first among those horrors which took the power of our youth, and made the world a nightmare of strife.

Canada has, up to the present, taken a worthy place in the councils of the League. Other nations have recognized "the value of the Canadian contribution, relating that to a greater extent, perhaps, than most other World nations, Canada's position is an unselfish one, the outcome of a sincere desire to promote world peace in the interests of all, and not chiefly for the purpose of promoting Canadian securities or advancing purely Canadian interests.

Canada's future contribution can only be measured by the degree of interest manifested by its citizenship and the support extended by the Canadian people to their Government in all efforts put forth to strengthen the League and enlarge the scope of its humanitarian and peace promoting programs.

London's oldest bank. **Meat Consumers Protected**
London's oldest bank is the **Bank of Montreal**. Meat branding and grading service, the age of which cannot be certainly stated; but there is in existence a receipt dated 1837 for money deposited there in that year. The object is to protect the consumer from the quality of business as a goldsmith.

Needless Pain!
Some folks take pain for granted. They wait for their headaches to "wear off." If suffering from neuralgia or from neuritis, they only wait for the pain to return. Meantime, they suffer unnecessary pain. Unnecessary, because there is an antidote. **Aspirin** gives almost immediate relief from various aches and pains we once had to put up with. If pain persists, consult your doctor as to its cause.

Save yourself a lot of pain and discomfort through the many forms of Aspirin. Aspirin gives almost immediate relief from various aches and pains we once had to put up with. If pain persists, consult your doctor as to its cause.

Alberta As Oil Producer
Ventured Into Northland

Production Now Greater Than That Of Montana, New Mexico and Colorado

Alberta is now producing more oil than the states of Colorado, New Mexico and Montana combined, according to a compilation made by P. J. S. Sur, Calgary geologist. He said, "It may be interesting to the oil fraternity of Canada to know that although Alberta is a body in the ranks of the oil producing regions, it is producing now in its Turner Valley field more oil in barrels than the combined output of Montana, New Mexico and Colorado; and when the figures are computed into dollars the value of Alberta's production is seen to be more than twice that of the three states in question."

A STOMACH RESTORER

Good Advice From One Who Had Suffered Much

Discomfort after eating, gas pains in the intestinal tract, pains around the stomach, heartburn, indigestion, called heartburn, are common symptoms of dyspepsia. It is a condition of the stomach which is not properly manured, and the treatment is simple. The great contributing cause to this trouble is this blood. Good food is not properly digested, and the stomach to function properly. If the blood is thin the stomach becomes indigestible. Indigestion, gas, or other medicine can do this as promptly as it can make a man feel better. Pink Pills. The sole mission of these pills is to make men, rich, strong, healthy, which reaches every organ and nerve in the body, and thus not only builds up food lines, undigestion, but also all other troubles having their origin in the blood. The splendid results following the use of Pink Pills is shown by the case of Mrs. Lucy A. Cushing, a former resident of Keap, N. Y., but now living with her son at West Bethel, Me. Mrs. Cushing says: "I suffered from indigestion, gas, heartburn, and other troubles for many years. After eating I suffered from pains in my stomach and other distressing symptoms that accompany this ailment. I tried different doctors and medicines at my old home and also at West Bethel, but without getting relief. I was advised by a friend to try Williams' Pink Pills. I did so and I am now restored to good health. I feel great relief since the good friends who gave me the advice. I am now at 35, and am enjoying life once more."

You can get these pills through any dealer in medicine, or by mail at 50 cents a box from Dr. Williams' Medicine Co., Brockville, Ont.

High Quality Seed
Inspection Shows Ample Supply To Meet Requirements
G. M. Stewart, head of the Dominion seed branch at Calgary, states that the 1929 inspection of standing crops of grain for members of the Canadian Seed Growers' Association shows it can be reasonably expected that there will be an ample supply of seed of high quality to meet requirements for next year. Yield seems to be somewhat higher than had been generally reported. There were nine inspectors out and 500 fields viewed, including many in the Peace River country.

Deposits Are Important
British and American Capital Interests in Manitoba Tin
"British and American capital is definitely interested in the possibilities of tin in Manitoba," according to the Free Press Evening Bulletin. "Tin ore has been found in many places, and work now in progress in two or three camps will go far towards proving whether or not it is to be found in commercial quantities. But whatever the outcome, both British and American capitalists intend to be strongly represented, because of the supreme importance of such deposits."

Recieves New Appointment
Dr. Seymour Hadwen, research of animal diseases at the University of Saskatchewan, has been appointed director of veterinary science for the Ontario Research Foundation.

England Sends Trees To China
To Be Planted Around Mausoleum Of Sun Yat-Sen
Representative trees, an oak sapling and a young birch tree are to be sent from New Garden, London, England, to be planted in the grounds surrounding the mausoleum of the Chinese statesman, Sun Yat-Sen at Nanjing. Reports from the East say that when the mausoleum of the first Chinese president and its surroundings are completed, they will form one of the world's most beautiful spectacles.

Mina's Linctus For Neuritis
Young people aren't as quiet as the young people of older days used to be, but neither are the old people.

Three American Women Made Interesting Trip This Summer
Three women in a boat, not to mention the public, made a three weeks' journey down the Peace River this summer to fulfill the adventurous dreams of three American girls. For the far northern of Canada has an allure not alone for the sturdy settlers who farm its broad stretches but to a wide circle in the study to the modern explorer.

Meeting at Vancouver, Dr. June Lightning, a doctor of philosophy, from the University of Minnesota, Dr. Lydia Lightning, her sister, a physician from Philadelphia, and Miss Lillian Larson, a physical training instructor from Casper, Wyoming, took the boat to Prince Rupert, the train to Prince George, and from there their adventures began.

Justice Robertson of Prince Rupert assisted the party of women to make the final arrangements. He is an admirer of the district and knows what is needed on such a trip. Here the women made the trip to Summit Lake by truck through the beautiful country of northern British Columbia. Boating for days on the Peace River and rivers until the Peace River itself was reached was a delightful experience, Miss Larson said.

At Fort MacLeod an Indian Chief opened his log house to them, and invited the neighborhood to a powwow they danced until the morning of the next morning. The party camped every night along the river while their days were filled with fishing.

Every foot or inhabited place they came to was a signal for a dance which began early and lasted late.

Open Kindergarten For Japanese Children
School Has Been Inaugurated At Kobe By Canadian Church

The first kindergarten for children of foreign residents of Kobe has been opened by the Canadian Academy of Education. The kindergarten stands on premises offered to the academy by the Kobe Union Church.

Miss W. J. Taylor, of London, Ontario, who is specialized in kindergarten work and who recently arrived in Japan, is in charge of this new department of Canadian educational activities in this country. Mrs. A. J. Kentwell will assist her.

The initial enrolment of the kindergarten is 20 children, representing nine nationalities, including besides Canadian, Japanese, British, United States, Danish, Swiss, German, Russian and Indian nationals.

H. F. Woodworth, chairman of the board of the Canadian Academy, stated that with the opening of the department for the little children, the academy now has a complete range of education for a school of its grade, that is, from infancy up to entrance at a university.

The new department, Mr. Woodworth continued, is the result of a good deal of planning by the faculty. The idea having been conceived some years ago, but for various reasons it has been unable to carry it into practice until now.

It was pointed out that the kindergarten, open as it is to all nationalities, has an important mission in such a cosmopolitan community as that of Kobe, as it can render great service in stimulating international mindedness through the children.

When Food Sours

About two hours after eating many people suffer from sour stomachs. They call it indigestion. It means that the stomach nerves have been over-stimulated. There is excess acid, and you need to correct it with an alkali, which neutralizes many times its volume in acid.

The right way is Phillips' Milk of Magnesia—a tasteless dose in water. It is pleasant, efficient, and harmless. It has remained the standard with physicians in the 50 years since its invention.

It is the quick method. Results come almost instantly. It is the approved method. You will never use another when you know.

Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting excess acids. Each bottle contains full directions—any drugstore.

Advertise Your Town
Signs Showing Name Would Be Appreciated By Touring Visitors
In this vacation season automobile tourists must be impressed with the difficulty of knowing what town or village they are approaching, often when within its outer limits, because of the absence of a sign giving the town name, says the Boston Transcript. It is true that rural post offices are obliged to bear the town name, but unless some enterprising board of trade takes the matter in hand, the information regarding the place is kept secret.

This is poor enterprise, and worse advertising. Proper announcement of the town or city soon to be reached is information which the traveller often craves, and is always of interest, even though travelling at a speed makes sight of the town's name necessary.

An Oil Of Merit—Dr. Thomas' Eucalypti Oil
Is not a humble medicinal substance that is so often and pushed by advertising, but the result of the careful investigation of the healing qualities of certain oils as applied to the human body in cases of colds, coughs, and it won and kept public favor from the first. A trial of it will carry conviction to any who doubt its power, repair and heal.

Canadian Wheat For India
A shipment of Canadian wheat consigned from Montreal to India is believed to establish a new record in Canadian wheat exports. Conditions in India called for outside purchases and Canada was the foremost wheat exporting country in the world, received the order.

First—Buy a supply of Gyproc Fireproof Wallboard. Then erect Gyproc partitions in your office, changing the waste space into an additional room or two. Imagine how much more comfortable the family will be with the extra converted into a clear, inviting third story.

Second—Renovate the lower rooms by nailing Gyproc over cracked and faded wallboard. You can decorate the flat, smooth Gyproc surfaces with Alabaster, paint or any other finish. And what a difference it will make to your home.

Third—Line your garage with Gyproc. Gyproc will make it fire-proof, cold resistant and a safer, more substantial home for your car.

Fourth—Gyproc your poultry house. Your flock will have better health, and year-long protection from fire, cold, heat and vermin.

Fifth—Line your grain bins, barns, and other buildings with Gyproc. By doing so you will make them more valuable, fire-proof, cold resistant and 50 per cent more saving time and labor.

The Conquest Of Diphtheria

Anti-Toxin Considered Almost a Certain Cure For This Disease

Centuries ago great Greek and Roman doctors described in their writings the ravages of a nose and throat disease. They did not call it diphtheria in their records, but that is what it was.

A lot of things have happened since then. Medical men through the ages have given the disease their best thoughts, until now more is known about diphtheria than any other of the communicable maladies on the lists of human enemies.

But, even though knowledge is power, it does not mean, in this case, that the battle is completely won. Having acquired their information, the doctors must take further steps in order that it may do some good. They must tell the public and convince it, and move it to action.

In the case of diphtheria, if they succeed in doing these things, you may be reading in the newspapers some day, "So-and-so died today of diphtheria. A coroner's jury will investigate." And the jury will be told to know, "Who caused So-and-so's death," not "What caused it," mark you. But "What caused it," other words, we are reaching the point where it is considered unnecessary for a single death from diphtheria to happen, and when that happens it will be considered the result of somebody's carelessness, and that somebody will have to be punished.

Diphtheria results from a germ settling in the victim's throat. The germ gives off a poison called toxin, and it is this toxin that spreads through the system and causes illness. So the first treatment for diphtheria should be medical science, which has called anti-toxin.

Here is how it is made: A vigorous young horse, carefully tested to make sure that it had no disease, is used. It is carefully injected with increasing doses of diphtheria toxin, that is, the poison of the diphtheria germ. The horse's system immediately begins developing anti-toxin, in order to fight the effect of the toxin. After six weeks or so, if the horse through tests, is shown to be reacting satisfactorily, the horse is bled, the serum separated and refined by special methods which make it ready for humans.

Now, this anti-toxin is an almost certain cure for people who have contracted diphtheria. It is greatest in its effect when it is used immediately, the patient isolated and diphtheria, and every hour of delay means additional danger.

But there has been developed, through further research work with anti-toxin, another and more powerful weapon with which to defeat diphtheria. It has been developed only in the last few years, and it offers complete immunization. The person who takes this treatment will not be subject to diphtheria at all.

Toxoid gives what is called active immunization, as compared with passive immunization offered by anti-toxin. Toxoid contains no serum but is the product of diphtheria bacilli, rendered completely non-toxic by suitable treatment. Toxoid goes further than anti-toxin, because once in the human system it continues to stimulate our blood to produce its own anti-toxin. So the effects of toxoid are permanent, as far as can be discovered in the length of time it has been in use, as compared with anti-toxin, the powers of which disappear in a short time.

It is the recent discovery of toxoid that has raised in the medical profession such high hopes of the ultimate defeat of diphtheria. Results have definitely established the fact that if every one in the world would allow himself to be immunized with toxoid, there would never be another case of diphtheria.

Then there is one more discovery which has great bearing on the pending "Decline and Fall of Diphtheria," about which I would like to tell you. It is called the Schick test, and it enables doctors to find out whether or not a person is apt to get

diphtheria. It is made by injecting into the skin of the forearm about three drops of a toxic toxin. If the subject is susceptible to diphtheria, a red spot will appear on the arm within 2 or 3 days. It will be about the size of a ten-cent piece, and when it comes it means the subject is apt to get diphtheria and that the toxin is needed. If not, he is immune. The Schick test is just a skin test—the toxin used for the test does not enter the blood, so that no damage can result.

Precautions When Extracting Honey

Bacteriologist Finds That Several Varieties of Yeast Is Cause of Fermentation

Honey when properly ripened, usually considered immune from spoilage by fermentation, may be the cause of this fermentation under certain conditions. To ascertain the causes of this fermentation the Dominion Bacteriologist has for two years been working with fermented honey obtained from many sources. In his studies of the subject he has found several varieties of yeasts. Some of these, he has determined, are obtained by bees from certain flowers which they visit in search of nectar. The results of this work are contained in Bulletin No. 110, of the Department of Agriculture, at Ottawa, entitled "Microbiological Studies of Honey." In this it is shown that in the case of extracted honey at least, yeast contamination is partly preventable by the beekeeper and partly beyond his control. There is no doubt, says Dr. A. Grant Leach, the Dominion Bacteriologist, that by the exercise of careful precautions to maintain in cleanliness at the time of extraction and to ensure that containers and utensils are as nearly sterile as possible, a partial prevention of the yeast contamination of the extracted honey may be effected.

Two Canadians Included

The Confederation Club, East Aurora, New York, has published a list of the hundred "most useful people of the world." Two Canadians are included. E. W. Beatty, described as "Canadian Railroad Magnate, who is opening millions of acres to human needs; youngest railroad president in the world," and Jack Miner, described as "wizard of wild birds."

Announce Zeppelin Flights

The Zeppelin Works in Germany announced ten more passenger flights will be made over Germany this autumn, while another Mediterranean flight will be made during the winter. The construction of a new larger Zeppelin is expected to be completed by the autumn of 1920.

CANADIAN GIRL PILOT

Mrs. James H. Hopkins, who before her recent marriage in St. Patrick's Cathedral, Hamilton, was Miss Allen Vollek, of Hamilton, the first licensed Canadian girl pilot. She was entered recently in the Border Cities Air Derby to Los Angeles.

Growing Trade With Orient

Asia Buying Large Quantities of Lumber and Grain

Asia is taking five times as many logs and lumber through the port of Vancouver as it did a year ago. The Dominion Bureau of Statistics and Europe is buying through the channel and one-third of the grain passing through Vancouver is sent to the Orient. In the six months of 1919, the Orient took through that port 1,568,730 barrels of flour, out of a total shipment from Vancouver of 1,592,830 barrels, and 20,714,945 bushels of grain, out of a total clearance from that port of 55,000,000.

Journalists At Geneva

Over 1400 Have Attended Meetings Of League Of Nations

Statistics prepared by the League of Nations Secretariat show that the number of individual journalists attending each of the League's annual meetings has been to Geneva since the creation of the League exceeds 1,400. These journalists belong to more than 1,000 newspapers and periodicals from 52 countries. There are 109 newspaper correspondents permanently resident in Geneva.

Auntie (who has been visiting for a week) - I'm going home Sunday. Willie: aren't you sorry? Auntie - Yes, I am, because I thought you were going home today.

A Jack London Story

Tries His Hand As a Lumberjack But Finds To Make Good

Jack London may have been in a class by himself in writing about the rugged north land and the people who lived and worked and battled there, but as a lumberjack, he was only 50-50, according to E. R. Vipond, who used to run a tie camp in the British Columbia interior in the hazy days of the famous novel.

In fact, Jack London was such a poor hand in getting out timber that Vipond fired him and his companion both of whom, Vipond recalled, were "always writing letters."

"I spotted him as a tenderfoot first thing," says Vipond, who didn't recognize Jack London until years later, when he saw the novelist's photograph in a newspaper.

"I gave him and his pal jobs at a tie camp near Lardo," added Vipond. "They worked together and said they would soon learn. After two weeks of labor, they showed little improvement. I asked an old woodsman what he thought of them. He said they were fine fellows, but spent most of their time writing letters."

"They looked nervous one day, and suggested that they might be criminals hiding from the law," he looked them over and shook his head. "They looked nervous enough. But I had to let them go anyway. I had to get out 20,000 ties, and there were no men in the camp for men who couldn't do their share."

"Twenty years later, I spotted Jack London's picture in the paper. He was famous then."

Finds Birds On Island

Hundreds Of Puffin Seen By MacMillan Of Labrador Coast

An island swarming with puffin was discovered off the Labrador coast this trip by Commander MacMillan, who says that thousands of the picturesque little birds make the place their breeding ground each season. These birds build their nests by burrowing underground like foxes. They dig into the soil about three feet—a very convenient distance, as the investigators, by lying on the ground and shoving an arm in up to the shoulder, were just able to reach the nest to secure specimen eggs for their collections. The puffin is a picturesque little creature with a brilliant red nose of such a shape that sailors generally call them "sea parrots."

Said to be over 2,000 years old, a black oak boat, unearthed at Landrind Wells, has been sent to the Welsh National Museum.

There are two classes of people in the world, difficult to convince. There are their will-men and women.

Culling Means Progress

Keep Good and Discard Inferior Excellent Method For Farmer

Farming, like any other business, is a continuous process of culling the good from the inferior. Good ideas must be separated from the bad ideas, and good methods from the poor methods. Other things being equal, the farmer who harbors the fewest culs should be most successful.

Because of changing conditions in agriculture, a type of animal, a crop variety or a method of farming, which was the best available yesterday, may be out of date tomorrow and inferior to more recent types, varieties or methods. That which was sound and progressive a few years ago may be obsolete and unprofitable today because of the progress of agriculture.

The need of constant culling applies to every phase of farming. Despite the efforts and progress of dairymen, it is estimated that approximately one-third of the dairy cows on farms today are unprofitable. Many farm poultry flocks are made up of a high percentage of culs, as surveys made in recent years under the auspices of the provincial department of agriculture have proved.

Most farmers are alive to the need for constantly reviewing their methods and practices, realize that inefficiency is as unprofitable as undesirable livestock or crops. There have been many changes in the types of farm machinery and equipment used on the Canadian prairies during recent years. A worn, out-of-date machine or piece of equipment is just as much a cul as the boarder cow. The poor cow can be replaced with a higher producer, and the inefficient machine can be replaced with equipment which does the work quicker, cheaper and better. The Saskatchewan Farmer.

Boys American Motor Boats

Canada is a good market for American marine engines, motor boats and accessories. Imports of gasoline marine engines and motor boats from the United States, being valued at about \$571,000 for 1918, the Department of Commerce is informed by the assistant trade commissioner at Ottawa. Imports from the United States account for about 16 per cent. of all the motor boats sold in the Dominion, and 76 per cent. of the gasoline marine engines marketed in Canada.

Many a man who is well to do is also hard to do.

What others say to you is the effect; you supply the cause.

This new bulletin, obtainable at the Publications Branch, Department of Agriculture, Ottawa, goes into the cost of harvesting by different methods, the acreage that can be handled in a season by the combine, and many other questions that would naturally arise in the minds of those interested in the cutting and threshing in one operation.

Searchlights For Hunters

Indian Maharajah Has Five Mounted On His Automobile

Five powerful searchlights have been mounted on a streamline automobile to aid an Indian maharajah in spotting big game when he goes on a hunting trip. The hunting car has an extension light rigged up behind the driver's seat and four other searchlights ranged along the front to spot or confound the tiger or other game the rajah's party is hunting.

It's Understood

A kindly but somewhat patronizing landlady inquired of the young bride how she and her husband planned to spend their holiday.

"Our plan is thus far," replied the bride, a little distantly, "are only tentative."

"Oh, how delightful!" exclaimed the landlady. "I'm sure you will enjoy camping out more than anything else you could do."

"I don't know. I have never been with her when she is alone."

The Combined Reaper-Thresher

Use Of New Method Of Harvesting and Threshing Is Becoming Widespread

The combined reaper harvester as operated in Saskatchewan has been carefully observed by officials of the Swift Current Experimental Station. The reports of this study are contained in Bulletin No. 118, of the Department of Agriculture, at Ottawa.

Until 1927, it is pointed out, combines were almost entirely confined to the open plains region of Western Saskatchewan and Southern Alberta. In 1927 several were used over a less open country when the advent of the windrow harvester as an auxiliary to the straight combine encouraged a more general use of this machine. Last year combines were used to harvest wheat, oats, barley, spring rye, fall rye, flax, clover and timothy crops all the way from Winnipeg to the foothills of the Rockies and from the International boundary to township 80, in the Peace River District. The windrow harvester or swather, as it is also called, cuts the crop and lays the heads over on the windrows. It remains until dry enough to thresh. The harvester then comes along gathering it up by a special device known as a pickup. Another method of harvesting for the combine before the grain is ready to thresh, is to use a conditioner. The conditioner and a large to receive the headed grain. The large is so constructed that the contents can be thrown out of the machine in the form of a small stack. The grain is allowed to dry in these piles, and is later threshed by means of the combine.

These attachments are found to have a value particularly in enabling the farmer to cut his crop before it is too ripe and thus, avoid loss from frost, green weeds in the threshed grain and shelling losses. When the straight combine is used it is necessary to have the grain dry enough to keep in the bin without spoiling. Harvesting should be attempted when the grain is too soft to handle, green weeds in the threshed grain and shelling losses. When the straight combine is used it is necessary to have the grain dry enough to keep in the bin without spoiling. Harvesting should be attempted when the grain is too soft to handle, green weeds in the threshed grain and shelling losses.

Dyeing this way makes faded Dresses NEW

DIAMOND DYES are the finest dyes you can buy. They are made to give real service. They contain the very highest quality dyes that can be produced. It's the quality of the dyes in Diamond Dyes that gives such soft, bright, long-lasting colors, and keeps their depth and brilliance through wear and washings. Next time you have dying to do, try Diamond Dyes. See how easy and simple it is to use them. Then compare results. You will surely agree Diamond Dyes are better dyes. The white package of Diamond Dyes

is the highest quality dye prepared for general use. It will dye or set silk, wool, cotton, linen, rayon or any mixture of materials. The blue package is a special dye, for silk and wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy remember this. The blue package dye will dye every kind of goods, including silk and wool. Your dealer has both packages.

Diamond Dyes Sun Proof

EASY TO USE—BETTER RESULTS

Diamond Dyes contain the highest quality dyes money can buy. And it is to be expected that they are the life of the dye. The source of the colors; brilliant and permanent.

WORLD HAPPENINGS BRIEFLY TOLD

Italy has accepted the British invitation to a five-power naval conference.

The French cabinet has decided formally to accept the British invitation to participate in a five-power naval limitation conference in January.

To sell British Columbia lumber to New Zealand and Australia, a delegation of mill owners and operators will leave Vancouver, December 31, on the Korangi.

John T. Phelan, 60, superintendent in charge of the Donkey service, will be promoted to the position of assistant telegrapher in British Columbia, with headquarters in Vancouver, died at Victoria recently.

Officials of the Union Terminal Elevator Company, of which W. A. Anderson, Winnipeg, is president, have announced plans for the immediate construction of a one million bushel addition to the Port Arthur plant.

Commissioner Lucy Booth-Holberg, youngest sister of the late General Brannwell, received orders from General Edward J. Higgins, head of the Salvation Army, to proceed to South America and take charge of the organization's work there.

Canadian railways earned larger gross operating revenues in 1928 than in any previous year. Freight revenues amounted to \$415,633,456, passenger revenues to \$84,212,960, and total revenues to \$563,732,259. The freight revenue was by far the largest ever earned.

French Government statistics compiled at the end of the present bathing season show the surprising total of 29 drownings daily, most of them children who venture beyond their depth. There is a growing agitation for more stringent regulations regarding life guards.

A Floating Theatre
An old four-masted schooner will be fitted up in the near future to form a floating theatre. The ship will be called *Pro Arte*, and will cruise around the world giving plays representative of German spirit. It will contain a modern stage and seating capacity for 500 persons.

Resless Children

Children will fret, often for no apparent reason. But there's always one sure way to comfort a restless, fretful child. Castoria! Harmless as the recipe on the wrapper, mild and kind as its taste. But its gentle action soothes a youngster's nerves, and thus, some powerful medicine that is meant for the stronger systems of adults.

That's the beauty of this special children's remedy! It may be given the tiniest infant—as often as there is any need. In cases of colic, diarrhea, or similar disturbance, it is invaluable. But it has everyday uses all mothers should

understand. A coated tongue calls for a few drops to ward off constipation; so does any suggestion of bad breath. Whenever children don't eat well, don't rest, or have any little upset—this pure vegetable preparation is usually all that's needed to set everything right. Genuine Castoria has Chas. H. Fletcher's signature on the wrapper. Doctors prescribe it.

Planning To Change Desert Into Garden

French Engineers Working On Idea To Irrigate Sahara

The most stupendous engineering scheme the world has ever known is in the process of being blue-printed by three engineers of Marseilles, France.

They have spent four years in a preliminary survey and in three years more will be ready to propose a plan which will change the entire map of South Africa. Join the Mediterranean islands to the mainland, and 430,000 square miles to the possessions of France and Italy, and turn the Sahara desert into the world's most prolific garden.

At least a hundred plans for irrigating the Sahara desert have been advanced within 50 years, but none has been so thorough as this one.

The scheme is to build two super-dams, one at Gibraltar and one at the Dardanelles and bottle up the Mediterranean until it becomes a fresh-water lake, supplied by the European and African rivers. Enormous pumps would be installed to force this water into canals leading to the desert.

Though the engineers admit that they do not expect the governments of Europe to take kindly to their scheme, they seem to be enjoying themselves.

Winnipeg Newspaper Union

According to the opposition's management, Paup's entry, which consists of a sample of Victory oats, will be matched with products of the oats from the farthest corners of the world, which are sent to compete in this premier crop show of the county, annually held in connection with the International Livestock Exposition.

Already for the 1929 event, samples of three varieties of wheat have been received from New South Wales.

Had Diarrhoea Bowels So Active Feared For His Life

Mrs. S. J. Jago, Canby, N.B., writes: "My little boy, when three years old, had a severe attack of diarrhoea. The bowels were so active, he vomited much mucus, and he feared for his life. I tried many medicines, but he was getting worse. A friend told me of

and after the second dose I saw an improvement. I gave him one half a bottle and he was completely relieved.

I have used it for other children, and my husband and myself. My husband gives it to me when he goes away from home with him."

Put up only by The T. Milburn Co., Ltd., Toronto, Ont.

Black Strip Free Boat
Embodiment of the principle of buoyancy, the ship holds the heat enabled the captain of an ice-bound steamer in a lake in Alaska to extricate his ship.

He had a strip of refuse oil and lampblack, 40 feet wide, swabbed across the frozen lake lake. In a short time the strip softened sufficiently to allow the steamer to break through.

A Real Diplomat
Speaking of quick thinking, a man recently overboard his wife's birthday. Fearful she would find him of "Listen, darling," he said, "I know I forgot it, but I won't be a thing about you to remind me of it for a day older than you were a year ago."

All products exported from Spain are to bear a national label. A "Made in Canada" label on all Canadian exports might impress on other nations just how much the Dominion does export.

Spain is to have a model automobile road 260 miles long.

After Shave
Minard's mixed with sweet oil makes a cool, soothing after shave. Heals tiny cuts made by razors.

Makes First Grain Entry
Saskatchewan Farmer Submits Sample Of Victory Oats For Chicago Grain Show

To a Saskatchewan grain grower, James A. Paup, of Langham, goes the distinction of having made the first entry from Canada to be received for the International Livestock Exposition.

Hay Show to be held in Chicago, November 29 to December 7.

According to the opposition's management, Paup's entry, which consists of a sample of Victory oats, will be matched with products of the oats from the farthest corners of the world, which are sent to compete in this premier crop show of the county, annually held in connection with the International Livestock Exposition.

Already for the 1929 event, samples of three varieties of wheat have been received from New South Wales.

Had Diarrhoea Bowels So Active Feared For His Life

Mrs. S. J. Jago, Canby, N.B., writes: "My little boy, when three years old, had a severe attack of diarrhoea. The bowels were so active, he vomited much mucus, and he feared for his life. I tried many medicines, but he was getting worse. A friend told me of

and after the second dose I saw an improvement. I gave him one half a bottle and he was completely relieved.

I have used it for other children, and my husband and myself. My husband gives it to me when he goes away from home with him."

Put up only by The T. Milburn Co., Ltd., Toronto, Ont.

Black Strip Free Boat
Embodiment of the principle of buoyancy, the ship holds the heat enabled the captain of an ice-bound steamer in a lake in Alaska to extricate his ship.

He had a strip of refuse oil and lampblack, 40 feet wide, swabbed across the frozen lake lake. In a short time the strip softened sufficiently to allow the steamer to break through.

A Real Diplomat
Speaking of quick thinking, a man recently overboard his wife's birthday. Fearful she would find him of "Listen, darling," he said, "I know I forgot it, but I won't be a thing about you to remind me of it for a day older than you were a year ago."

All products exported from Spain are to bear a national label. A "Made in Canada" label on all Canadian exports might impress on other nations just how much the Dominion does export.

Spain is to have a model automobile road 260 miles long.

After Shave
Minard's mixed with sweet oil makes a cool, soothing after shave. Heals tiny cuts made by razors.

Scientists Declare Eiffel Tower Wobbles

Experts Discover Gigantic Structure In Paris Twists With The Sun

Probably none of the 13,268,836 people, including many Americans, who have mounted the Eiffel Tower since it was opened to the public in 1889, were aware that the giant structure wobbled beneath them, twisting and turning like a thing of life.

The tower is heliostatic. In the worst weather it suffers more from this structural malady than in the cold winter months, but all the year round it moves continuously.

In oppressive weather, the tower moves with the sun. During 24 hours in the hottest time of the year the twist at the summit makes its ellipse from east to west amount to 17 centimeters, roughly the width of three average size newspaper columns.

Since the tower rears its head 1,000 feet in the air it may be understood why passers-by and even conscientious sightseers who mount to the top to look down on Paris are unaware of the wobble. As a matter of fact, scientists themselves have just discovered it.

For years a story has been generally believed by Parisians that the Eiffel Tower daily adds something to its height, because of the atmosphere, but this is denied by M. Chagnon, one of the tower's engineers.

"That yarn was probably invented by newspapermen," he declares. "The tower is fixed firmly in the concrete foundations from nose to tail, and it does not move at all."

Measurements made by scientists at the top of the tower show that there is no expansion in hot weather; only the metal on the summit side being affected; with the result that the structure at the top does not follow the second landing, bends outward an infinitesimal degree every day. The ellipse develops to its longest point at the hottest hour. As the day cools the twist vanishes.

The attraction which the tower still exercises for visitors is as strong as ever. In the tourist season the crowd who wait their turn to be whizzed up to its dizzy heights number thousands, mainly Americans.

But the record for visitors set in the year of the towers opening, 1909, has never been equaled and probably never will.

In the 12 months of that year 1,968,234 panted their way up the endless stairs to the top.

Wonderful Doors Revealed
Cleaning Has Restored One Of Glories Of Westminster Abbey

The simple process of cleaning has revealed one of the glories of Westminster Abbey, hidden for years.

The beautiful tomb of Henry VII, and Elizabeth of York, his queen, with the carved bronze grille which it is enclosed, and the bronze doors leading to the chapel, have been revealed by this cleaning.

The doors were completed first. Up to the time that their glistening hue was again revealed to the public they were dull and black in the light of the abbey, the great doors now gleam like pale, burnished gold.

With the wonderful detail of the tomb is said to be one of the finest in the world. Architecturally, it has been widely hailed as a work of most unusual excellence. The doors, tomb and the grille are the work of the great Italian artist, Pietro Torretto, who constructed this outstanding piece of work more than four hundred years ago. It is said to have taken the artist four years to complete it.

Invents New Torpedo
Don Manuel Garcia Diaz, Spanish naval officer, is said to have invented a torpedo which can be fired without detection by a submarine.

Where the old type torpedo left a noticeable wake after its release, the new one leaves nothing to show. Submarines could strike with these without warning and without detection.

Had Good Reason
Sir James M. Darric, the noted author, has revealed why he is so fond of old Glasgow. Speaking of his younger days, he said there was once a horse show in the Scottish city. "I patronized it and lost a pair of pants," went back at night, climbed the park and searched for it. I found three. No wonder I have a friendly feeling for Glasgow."

Small aeroplane recently exhibited the Regatta Aero Show, and costing \$1,700 each, are capable of 85 miles an hour over long distances. They carry only one man.

Mechanical cotton pickers are put on the market. It is reported.

Take Care of Your Coughs and Colds

Thanksgiving Day

Advance Opinion That Day Of Thanksgiving Should Be Fixed For October

That is a good suggestion that comes from the Canadian Chamber of Commerce, that Thanksgiving Day should be fixed for some time in October. Before Armistice Day came along with such a whirlwind of thanksgiving that people thought it should be continued for all time. Thanksgiving Day was held in October. Then, with the harvest nearly done, people gave thanks in wealth or that made everybody thankful that he was alive.

Now thankfulness for the end of the war has melted into memories of the heroic dead—memories that do not fit in with the joyousness that characterizes the regulation Canadian Thanksgiving of feasting and sport. Armistice is a day apart. It lends itself to solemnity, mingled with sorrow. Let it have early November all to itself. Put Thanksgiving Day back where it belongs—Toronto Telegram.

Might Try It Here
The diet government has found a way to make nightingales sing to go to bed. It turns off most of the street lights and doubles the price for food and drink after 10 p.m.

Red brick gives its color to iron oxide in the clay; buff brick is the result of iron sulphide.

He Asked Them Does It Pay To Clip Cows?

A CERTAIN farmer wanted to see the facts about clipping cows so he wrote up for names of those owning clipping machines. He wrote them out, but he himself is so pleased with the Stewart Clipping Machine he sent in a letter which made him decide the clipping machine is a help in his business. Here are some of them:

"Short of a good hand, a machine is necessary to keep cows clean and make them shine. The machine has had no other trouble with her."

"Before we clipped our cows we had a high labour cost. Now, as after we clipped them we had a number of cows to sell. The clipping is improving the quality of our milk."

"Whitely. And it certainly is a wonderful help in reducing loss."

"We find it much easier to keep them clean and free from vermin when clipped. To have clean milk you must have clean cows. We raise quite a number of calves every year in that way we always have a price for our milk. The clipping is improving the appearance of our milk."

"How TO CLIP COWS"
Gubbins, the principal source of butter, cream, milk, and cheese, is said to have taken time out of his milk house to make a list of the names of the cows who are clipped. It is said to be a list of 100 names.

"The Stewart Clipping Machine is a very low priced machine. It is easy to use and it is a real help to the value of an animal."

Sixth Year Molar

There is one tooth which is the most important in securing a properly developed jaw with regular teeth. This tooth is the first permanent molar, and is commonly called the sixth year molar. Its popular name is apt to be misleading, however, because the tooth may appear earlier or later than the sixth year. It comes in first behind the temporary or baby teeth; indeed it is often mistaken for one of the baby teeth and as such, it is neglected, the parent thinking that it will be replaced by a permanent tooth later on.

The important tooth can be easily recognized. In the temporary set, there are ten teeth above and ten below, or, in other words, five on each side above and below. If there are more than five, then the sixth tooth which appears is the most important first permanent molar, which must be carefully guarded and preserved because of its being the "keystone of the dental arch."

The loss of the first permanent molar means that the jaw will not be properly formed, the other teeth will not be in proper position, and, as a result there will not be the perfect mastication that there should be.

The importance of the teeth as factors in health is generally known. A clean mouth means healthy teeth and gums. Dental disease is responsible for a great deal of illness and suffering. It is essential that parents and those responsible for children realize that, in order to have sound teeth in adult life, an early start must be made. We refer here to this first permanent molar which often appears in the fifth year, and which must be preserved if the child is to have sound healthy teeth. This simply means that dental care cannot be postponed, but that it must begin early in life.

Proper diet, cleanliness, regular visits to the dentist are

the basis of dental health. If these are begun early and persisted in, satisfactory results will be achieved.

Questions, concerning Health, addressed to the Can. Medical Association, 184 College Street, Toronto, will be answered personally by letter.

total and the said municipalities, with the object of making the institution as beneficial in service to the town and the territory tributary thereto, the nurses also stated that it would be their wish that one of the functions of such a board would be to consider any complaints that might be submitted to it.

in writing and to investigate same, with the object of making suggestions to the management of any improvements it might be possible to make, and also to dispel any rumors that might arise when such complaints were found to be without sufficient grounds.

It was also stated that the nurses wished that such board should make an inventory of all supplies in the hospital that were not private property and that the ownership of same should be vested in trust in the board for the hospital service to the community, so that in the future no question might arise as to what was public and what was the property of the management.
